Dear Mr Dexter

We have consulted with the Agency for Toxic Substances and Disease Registry (ATSDR) regarding your proposal in Mary Erio's (Burns & McDonnell) letter of September 29, to cover sediments in the old sedimentation pond. We find the proposal is adequately protective of public health and the environment and hereby approve this work plan modification for implementation.

Recently we have noted that cleanup actions at this site have been resulting in the release of windblown dust from the site which may contain concentrations of lead which would be unacceptable in the residential land uses which surround Elliott Shooting Park. We also note that cleanup of the pit over on the east side of the site, which contains clay pigeon fragments and lead-contaminated soil, may increase the problem of airborne contaminant release. It appears that in order to deal with the lead-contaminated soil from this pit the soil will have to be separated from the clay fragments. We understand that you and your consultant are considering some type of dry separation for these materials.

As a result of the observations we have made and the increased potential for contaminated wind-blown or dust to be released from the site we request that you submit a plan for the control and monitoring of airborne lead contamination to the Environmental Protection Agency (EPA) for our review and for the review of ATSDR, with whom we coordinate for health-related matters. Please contact our remedial project manager, Dave Crawford, at 236-2856, if you have any questions and advise Dave as to when EPA may receive the requested plan for our review.

Sincerely yours,

Robert L. Morby
